URGENT GAS SAFETY NOTICE

By the **end of 2012**, any registered gas engineer will place your boiler **"At Risk"** if they cannot fully examine the flue. They will formally advise you to fit inspection hatches in the appropriate places so that an inspection can be fully carried out. Until the hatches have been installed, the boiler will remain **"At Risk"** and put your family in danger from carbon monoxide (CO) poisoning which can cause death or serious injury.

You or your landlord will need to arrange for inspection hatches to be fitted.

You need to take action now!

Contact us for a hassle free inspection hatch installation by competent experienced tradesmen insured with public indemnity cover. We fit quality white powder coated, metal, BS fire rated access panels.

Although most of the affected boilers and flue systems are relatively new (installed since 2000), the risk of faults leading to the release of CO increases as the system gets older, especially if it is not serviced regularly.
